BIOPHORA™

SCIENCE MADE SIMPLE

Straightforward, easy to use and effective skin care is the hallmark of the Biophora system. Biophora is formulated on the principle that *technically advanced* doesn't have to be a regimen of expensive and complex steps to attain healthy, toned, and more youthful looking skin. In a matter of a few days or weeks, Biophora can quickly help you improve:

- Fine Lines
- Acne / Blackheads / White heads
- Hyperpigmentation / Brown Spots
- Rough Skin
- Enlarged Pores
- Oily / Dry / Flaky Skin
- Healthy Glow / Younger Looking Skin

The skin is the largest organ of the body. It withstands tremendous exposure to elemental factors: sun, wind, and extreme temperatures, as well as the effects of internal and topical nutrient and moisture deficiency. Biophora is designed to correct as well as defend the skin from the impact of these factors. This unique system aggressively exfoliates while replacing essential nutrients. Biophora works most effectively in conjunction with a healthy lifestyle, which includes proper sleep, nutrition, the intake of sufficient levels of high quality water, exercise, supplements, and stress management, avoidance of smoking and moderation of alcohol.

The Biophora system has been created in collaboration with dermatologists, plastic surgeons, anti-aging specialists and naturopathic doctors to produce a state-of-the-art product line and protocols, designed to make skin science and maintenance simple for the patient.

Why Biophora is So Effective

Clinically advanced and natural ingredients that challenge and promote cell renewal are specifically formulated for Element Exposed/Normal, Acne/Oily, Sensitive/Dry, and Combination skin types. A personalized consultation with our highly experienced, Biophora trained, technicians will determine the exact protocol that will ensure the safe and effective results you require.

The Biophora System consists of a two-part program: to create desired results.

- 1) Homecare products used daily.
- 2) Customized clinical treatment schedule.

Daily use of the Biophora products will improve the texture, evenness of skin tone, reduce the appearance of fine lines as well as calm or arrest most acne conditions. Clinical treatments or Biophora Glycolic, Lactic, or Salicylic Peels performed in your physician's office will greatly accelerate your results, as well as enhance your daily skin treatment protocol.

The accumulation of dead skin cells on the most topical layer of the skin, contributes to a dull appearance, uneven texture, bacteria formation, and in turn, most acne conditions. Biophora Peels, consisting of cosmeceutical and physical exfoliation, will allow for a more vibrant, refined texture and improved clarity of the skin. These procedures activate cell renewal and prepare the skin to absorb products which can encourage the body's own collagen

production. These peels also prepare the skin to receive Biophora's active ingredients, nutrients and anti-oxidants, essential in the nourishment and healing of the skin.

The Biophora Glycolic Peel

The Biophora Glycolic Peel is a 20–30 minute cosmeceutical and physical exfoliation of dead skin cells that form on the surface layer of the skin. This peel leaves the skin deeply clean and smooth in texture. It is available in 15% to 30% concentrations and used on Element Exposed/Normal or Acne/Oily skin. The Biophora Glycolic Peel is non-invasive and requires no recovery time. Biophora SPF must be used and makeup may be applied following the peel.

The Biophora Lactic Peel

The Biophora Lactic Peel is a 20–30 minute cosmeceutical and physical exfoliation of dead skin cells that form on the surface layer of the skin. This peel is specifically designed for Sensitive/Dry skin but is effective for Element Exposed skin as well. The Biophora Lactic Peel is non-invasive and requires no recovery time. Biophora SPF must be used and makeup may be applied following the peel.

The Biophora Salicylic Peel

The Biophora Salicylic Peel is a highly effective peel and the most aggressive of Biophora's peels targeted to exfoliate the superficial layer of dead skin cells. Available in 20% or 30% solutions, it is excellent for Acne/Oily Skin types but can be used with very positive results on all skin categories. The Biophora Salicylic Peel is non-invasive & requires no recovery time. Biophora SPF must be used and makeup may be applied following the peel.

What To Do Before A Biophora Glycolic, Lactic, or Salicylic Peel (2-3 days prior)

Do not use products containing active ingredients such as Retin-a, or strong Retinols.

Speak to your physician concerning topical prescription medication use.

Eliminate any active exposure to the sun. Please schedule chemical hair treatments, electrolysis or facials 7 days before and / or after the day of your Biophora Peel.

A prescription for an antiviral medication may be needed if the patient has an active history of herpes simplex. Peels are not advised until 4-6 weeks after a herpes simplex lesion has healed.

What to Do After A Biophora Glycolic or Lactic Peel (2-3 days)

Facial scrubs, abrasive or exfoliation materials should be avoided.

Do not use products containing active ingredients such as alpha or betahydroxy acids, Retin-A, or retinols.

Speak to your physician concerning topical prescription medication use.

Eliminate any active exposure to the sun.

What to Do After A Biophora Salicylic Peel (5-7 days)

Eliminate any active exposure to the sun. Facial scrubs, abrasive or exfoliation materials should be avoided.

Do not use products containing active ingredients such as alpha or betahydroxy acids or retinols.

The exclusive use of Biophora DermaRich Moisturizer is advised for a 1 -week period.

It is important that the patient refrain from picking or scratching the treated areas.
